

TERMINAL EMULATION AND WEB BASED DATA COLLECTION

SMART CLIENTS FOR UNITECH PORTABLE TERMINALS
3270 | 5250 | VT220 | HTML (Web)

Access business critical legacy applications running on IBM 3270, AS/400 5250, VT hosts or Web server, from any Unitech portable terminal.

The family of portable terminals from Unitech are high performance rugged devices running the Windows CE / Windows Mobile operating systems. These are available in multiple keypad configurations and peripheral options. The devices are ideally suited for data collection applications across several vertical market applications like warehousing, inventory management, logistics and manufacturing.

Device tailored versions of Naurtech CETerm software are available for all portable terminals from Unitech. CETerm is a 4-in-1 software application which includes Terminal Emulation and an Industrial Web Browser. It is optimized to leverage the ergonomics of each portable terminal to allow you to build superior data collection solutions.

FEATURE HIGHLIGHTS

- Full support of 3270, 5250 and VT220 terminal emulation
- Industrial Data Collection Web Browser for access to web based applications
- Scriptable workflow automation engine to automate and customize workflows
- Simultaneous multiple host sessions
- Security: Secure Shell SSH and SSL
- Western European code pages and support for multi-byte character set languages (Chinese, Japanese, Korean, Hebrew...)
- Custom hardware key remapping and software keypad
- Device Operating System lock out
- Simultaneous multiple host sessions
- Macros & Automatic login
- Automatic install and session configuration during device cold boot
- Full screen readability with Context Menus
- Integrated support for barcode scanner controls (also 2D Imager and ALR scanners)
- Serial, IrDA and Bluetooth printing
- HotSpots: Leverages the graphical "touch screen" for optimized application interaction

VALUE PROPOSITION

Our solutions allow users to access their legacy host applications and open a path towards newer web based applications. Here are some advantages for doing so:

- Address the migration path requirement: From legacy TE to new GUI rich web based applications.
- Fully support proprietary TE and Browser extensions from vendors like Symbol, Intermec and LXE. This allows you to target several large accounts currently locked by these competitors.
- Seamless upgrade path from legacy Telxon, Intermec and Symbol terminals (like 860 / 960, Antares family and 6800) to newer Unitech portable terminals.
- Easily integrate with serial port peripherals like weighing scales to automate your solutions.
- Solution for integrating with applications like the new web based SAP Auto ID Infrastructure (WebSAPConsole) using Unitech terminals.
- Directly interfaces with the host application. No middleware / authentication gateways necessary. Lower TCO.
- Client / server solutions to access host applications are more expensive and have longer deployment cycles.
